FYI,

I'm not sure if this has been corrected already, but if not, please correct 5month MRI data set mislabeling:

20180111_100844_EpiBios_B4C_Rat2205_M_W20_I_1_1 is actually images of #2204 (the rat has FPI lesion that matches perfectly the #2204 lesion in previous timepoints) and

most likely the

20180111_122929_EpiBios_B4C_Rat2204_M_W20_I_1_1 is actually the #2205 (the rat has no lesion, and 2205 is a sham)

Ex vivo 2204 is correctly labelled (the FPI lesion again matches the earlier time points), so I would assume the EEG is correctly labelled as well

Thanks,
Riikka
