

## **RESOURCE SHARING PLAN – PROJECT 3 – BIOMARKERS OF HUMAN EPILEPTOGENESIS AFTER TRAUMATIC BRAIN INJURY**

How final research data will be shared is detailed in the narratives for the study's Administrative Core and the IAC. Those documents cover all aspects of sharing, intellectual property considerations, and management. Project 3 will follow those details in full and will not develop separate policies or repositories for resource sharing with one exception: Full specifications for the MRI baseline phantom study protocol to unify all collaborating MRI scans in Project 3 under one integrated data collection and analysis schema will be made available by website and professional publication.
