

CONSORTIUM/CONTRACTUAL ARRANGEMENTS – PUBLIC ENGAGEMENT CORE – EPIBIOS4RX

The performance sites for the Public Engagement Core will be the Albert Einstein College of Medicine in the Bronx, NYC, NY and the University of Calgary, Alberta, Canada. Drs. Solomon Moshé and Nathalie Jetté will be the Lead PIs. The overarching goal of this Core is to actively engage voluntary organizations with the EpiBioS4RX CWOW in public outreach and knowledge transfer for the development of effective strategies to successfully design and complete clinical research studies, including future trials of disease modifying or prevention therapy in epilepsy. To accomplish this the Public Engagement Core has enlisted the collaboration of a large number of consumer groups and health organizations. The ultimate objective of the Core is to create a universal shared resource for epilepsy involving consumers and consumer organizations that could be used to design and execute large-scale intervention studies.
